

THREE WEEKS OF INTENSIVE WORKSHOP FOR OUR NIOS STUDENTS AT GASHAR SCIENCE CENTER.

Annual Report: Gashar Science Center's Intensive Workshop Program

We successfully ran a **three-week intensive session** at Gashar Science Center for NIOS students. This curriculum covered a wide range of courses, including **science and technology**, **psychology**, **social science**, **data entry**, **home science**, and **business**. Its goal was to give students in-depth knowledge and useful skills. Students followed a demanding 6-hour schedule every day, participating fully in the curriculum and reaping the benefits of an orderly learning environment.

The goal of the workshop was to improve students' comprehension both **theoretically and practically**, and we are happy to report that there were **notable improvements**. Our committed faculty members were instrumental in providing excellent training and creating a stimulating learning environment. Their dedication and knowledge were essential to the program's success. We sincerely thank the students for their enthusiastic and ongoing participation, which was essential to this initiative's success. Throughout the entire workshop, their active participation and enthusiasm to learn were genuinely admirable.

We also thank the **Gashar School** for providing a great location and the tools needed to run the sessions effectively. The program ran smoothly in large part because of the center's encouraging atmosphere.

We also thank the numerous supporting departments for their time and resources in helping with various areas of the training. Your cooperation and encouragement were crucial to the program's overall success.

We can't wait to extend these kinds of programs and keep **giving scholarships** in the future. We think that these kinds of programs are crucial for giving students the chance to learn intensively and develop their skills. We hope that by funding these initiatives, we will assist our students' academic and personal development while also serving the larger community.

In summary, the Gashar Science Center intensive workshop has been an incredible success because of the combined efforts of all those engaged. In the future, we hope to build on this accomplishment and keep giving our students worthwhile educational experiences.
